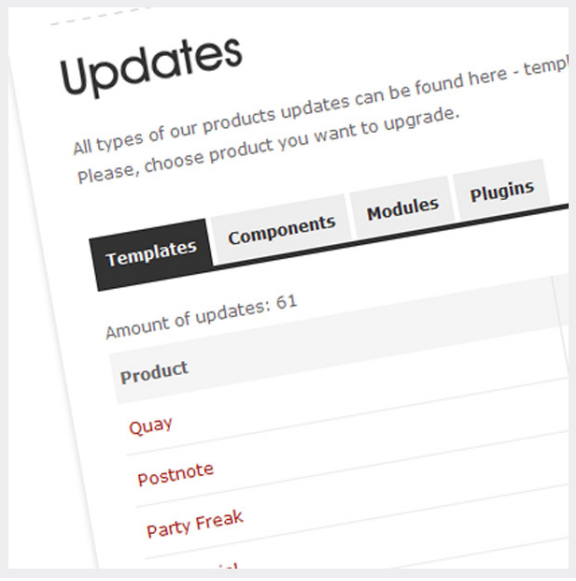
* Fully compatible with: IE7+, Firefox 2+, Firefox 3, Flock 0.7+, Netscape, Safari, Opera 9.5, Chrome.
* Delivered with source Adobe .PSD files.
* Delivered with "QuickStart Package".

# Preliminary Notes

Before start experience PostNote Template, please read the following notices:

## Keep Always Update

Our templates and extensions are constantly updated to ensure correct operation in the latest Joomla! environment. Therefore, we strongly recommend having your website always updated and also keep in touch with the gavick updates releases. You can check if there's any updates available by seeing the parameters of the template or extensions. Also, you recommend regular visits to our official update server on http://www.gavick.com/updates.html.



## New in Joomla?

If you are a new user in Joomla, we strongly recommend that you perform some tests and experiences to fit into this excellent CMS (Content Management System), and visit the oficial support forum of www.joomla.org for any problem with direct relationship. GavickPro Studio is not responsable of Joomla, neither gives respective support. Nevertheless, if possible, we will be happy to help you in our support forum.

## Building a new Website?

If you are building a new website and you like our demo template, we strongly recommend the use of QuickStart version and from this start, change to your own content. This way you can easily take advantage of the respective configurations of the different extensions added on the demo template. For more information, please consult the respective chapter the you will find later in this manual.

## Already have a website and want to take advantage from settings of our demo?

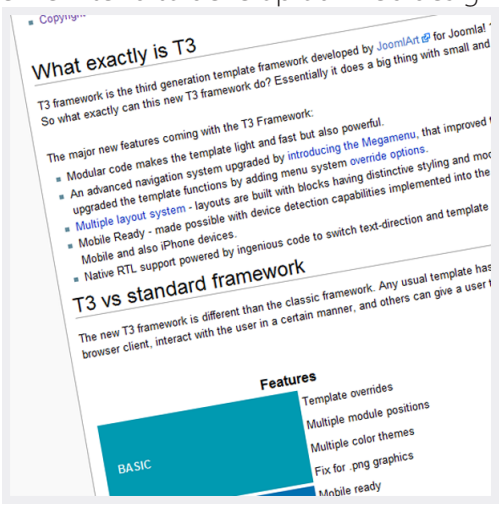
If you already have a web page with its contents, of course you can not directly use the quickstart version, as this will erase and replace all information from your website. However, this doesn't mean the quickstart version will be useless. You can use it as an instrument for consulting and guidance of the settings that we have prepared on our demo template. Either locally through a local server such as XAMPP local server (search on google for more information) or installing a test website, the quickstart version is of great importance, so you can gain knowledge of all template and tools potential.

## 3th Party Extensions on GavickPro Templates

Our technicall and development team always provides the best conditions possible, for our extensions act in conjunction with other tools designed from other joomla development teams, but we can not guarantee that in any case our tool will be compatible with them, working on the same environment. In situations of incompatibility, you can send us a report, and if possible, we will try to provide a solution. However, considering that we do not have any responsibility on other projects. From this statement, we strongly caution in selecting the tools it deems necessary for the activity and dynamics of your website.

# T3 Framework on GavickPro Templates

Since February 2010 that GavickPro develop their projects based on JoomArt.com T3 Framework. The most important reason for us to choose and use the T3 Framework is it's quality. After exhaustive tests performed by our team, we can say that is the most powerful tool while building Joomla Templates and who identifies more with the structural model where we intend to develop our web design projects.

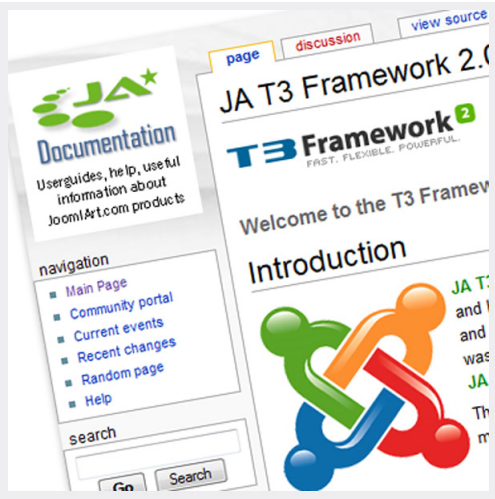


Here are the outstanding features of T3 Framework.

* Released under GPL
* Supports multiple layout options, set up within seconds of backend
* Options to create custom layouts and replaces
* Various types of support menu (Menu Mega)
* SEO handle - Ultimate content at the top
* Support native iPhone and Handheld and optimized
* Right to Left language support (in development)

You can learn more generalized information by visiting the following page: http://wiki.joomlart.com/wiki/JA_Template_Framework/Overview

# T3 Framework v2



In the latest framework version, we have changed the number of menu types; instead of five menu types, we choose to use three of them which differ significantly, namely: Mega Menu, Split Menu and Dropline Menu. CSS Menu and MooMenu functionalities are possible to gain from Mega Menu level, therefore we have decided to resign from these two menu types.
We introduced support for Google Font API which additionally widen the list of fonts available for templates.
Moreover, we have decided to add a code which compresses scripts and CSS styles, the same as it is done in T3 2.0 Framework.
We have prepared support for *LESS – with the use lessphp library.* Thanks to this, it is easier and faster to create styles for your own www site. This option is prepared mainly for programmers, therefore we have prepared an additional section called "Dev mode" in template's options.
Very important change added is in the way of calculating of left and right column width. Till this moment, the width of left/right column was the sum of right1 and right2 columns (or left1 and left2 in the case of left column). After the change in template's option, we specify whole column's width and the width of second inside column. Thanks to this, we avoid the situation where modules placed over or under right1 and right2 positions have width which depends on right1 and right2 columns' content. It allows to have better control over the site's arrangement. Other changes have functions to make the template look neat and to order generated structure by the template (in the field of CSS classes generated).

You can check more informations regarding T3 v2 Framework on:
http://wiki.joomlart.com/wiki/JA_T3_Framework_2/Overview

## Getting and Overview files

To get all the files needed to install PostNote Template, please visit our commercial area, accessible only via GavickPro Membership Subscription. Find out PostNote download page and get the following files.

### gk_postnote_J!15tgz

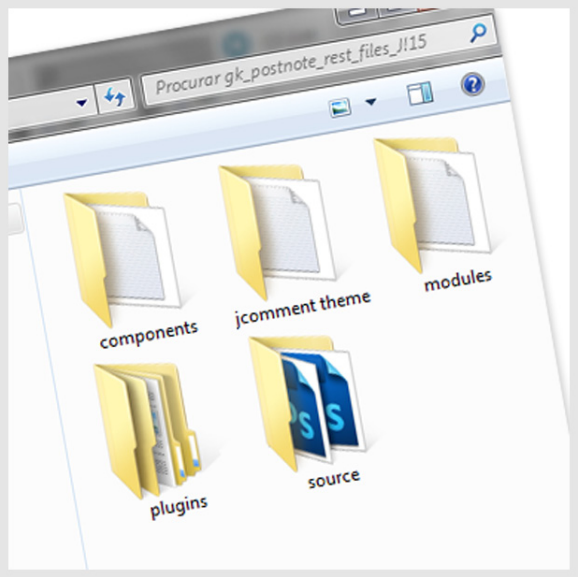
This file is the template. Installation must be done using the Joomla installer.

### gk_postnote_rest_files_J!15.zip

In this package you will find the other files or instructions how to get them to complete full installation. Some of the files are from gavick and depending on each project, some will be from 3th party free extensions, so you can get them on our download page or on respective authors website, since they will not be included on this package. These are the files you will find inside.

## Components:

This template supports 3th party extensions like the populars K2 and JComments Components (both free joomla extensions), so you will find instructions to get this extensions on this file.



## Jcomment theme:

These files were specially prepared for support design of JComments component. Should be copied to the following location ../components/com_jcomments/tpl/

## Modules:

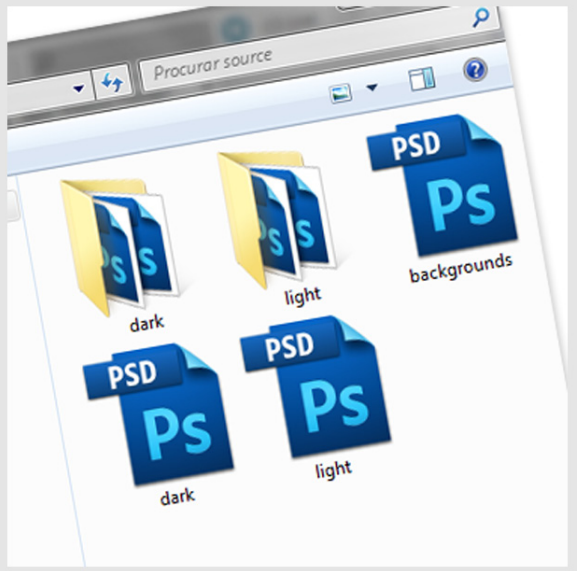
Instructions to download GavickPro News Show Pro GK4 module.

## Plugins:

mod_gk_register.zip - GK Register Module is specifically designed to integrate our templates with "Register" hidden box option. Its function is exclusively for registration of new users.

plg.gk_typography.zip - GK Typography plugin for WYSIWYG editor use. With the integration of this plugin you can easily make use of typography prepared for the template, allowing enrich the look of your articles.

plg_system_menuparams.zip - This plugins assign extended parameters for Megamenu. It's absolutely necessary to install this plugin to take advantage of full capabilities of this menu system.



## source

Contains psd. source files for Photoshop Graphic Editor, ready to be changeable for customization of your website design.

Note: After made your own changes, "save as web" and replace the respective images (with same name) on template images directory.

# gk_postnote_quickstart_J!15.zip

In all our projects, we always provide a quickstart version where the installation is complete, compact, like a normal installation of joomla, already containing full extensions (ours and 3th party extensions if not commercial), their respective configurations, the template and demo content, exactly as you see in your demo. Further ahead we will illustrate how to proceed installing this version and how can be advantageous for you.

# PostNote QuickStart Installation

As in all our projects, we provide a version of quick installation that possess all the files already installed, configured, and with all the content equal to that used in our demo page.

This setup is ideal for those who want to start a completely new website, where you can benefit from the content construction, layout and presentation that we prepared for the PostNote Template and from there, change or add your own.

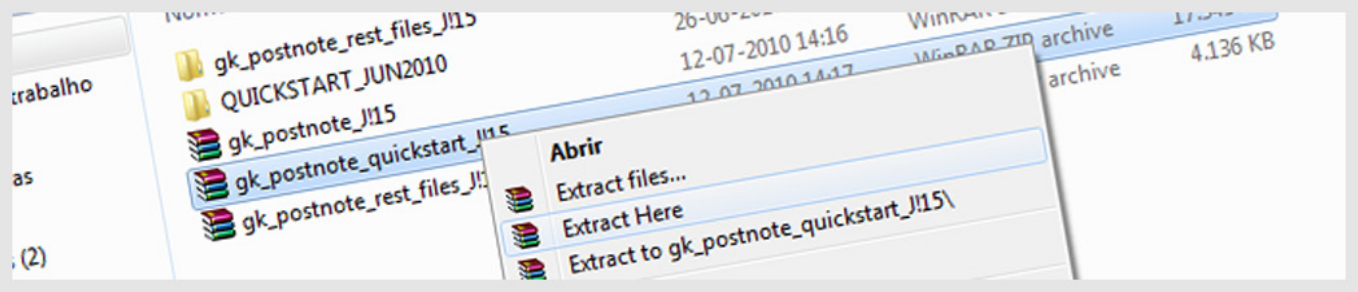
However, for those who already have a website with own content, this version can be very useful also, as can be installed on a test live website or even to be installed locally via a local server that can easily be obtained freely on the Internet. There are lots of options, but we recommend XAMPP server - http://www.apachefriends.org/en/xampp.html.

Installation is very easy to accomplish since it is exactly like a normal installation of joomla. To install the quickstart version, just follow this basic steps.

## Step 1 - Extract File

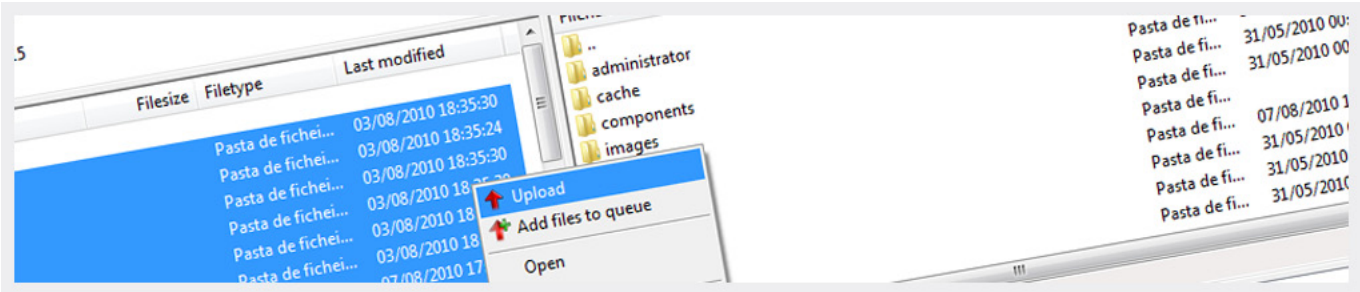
Extract gk_postnote_quickstart_J! 15.zip content. After extraction done, this folder (QUICKSTART_JUN2010) will contain within all the files needed to make the quickstart installation.

You may notice that the set of files are similar to the normal installation of joomla and that's because the process is exactly the same. So if you already done any joomla installation, this will not be hard for you.



## Step 2 - Upload files to your host

Using an FTP program (e.g. Filezilla) it is time to upload all files to the directory on your host where you will install the new joomla! website with PostNote quickstart.

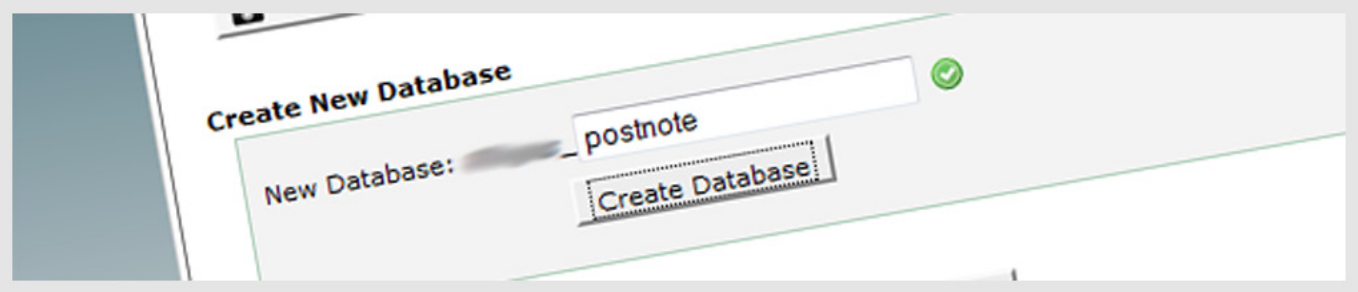


Depending on the upload speed of your connection and from your server, this process will take several minutes.

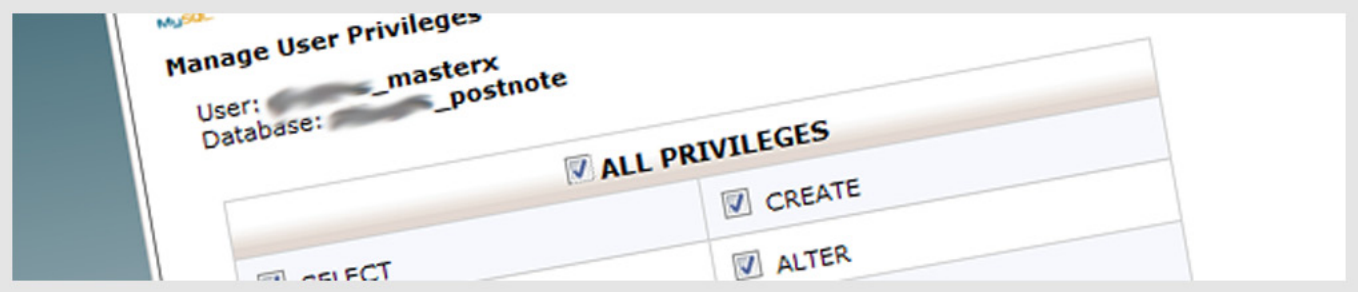
Important! Make sure all files are uploaded successfully. If some files are not properly loaded, a message should appear in your FTP program. If so, upload again only this files.

## Step 3 - Create a new database

Time to create the database that will be used on then installation. Go to the control panel provided by your host and create a new and clean database.



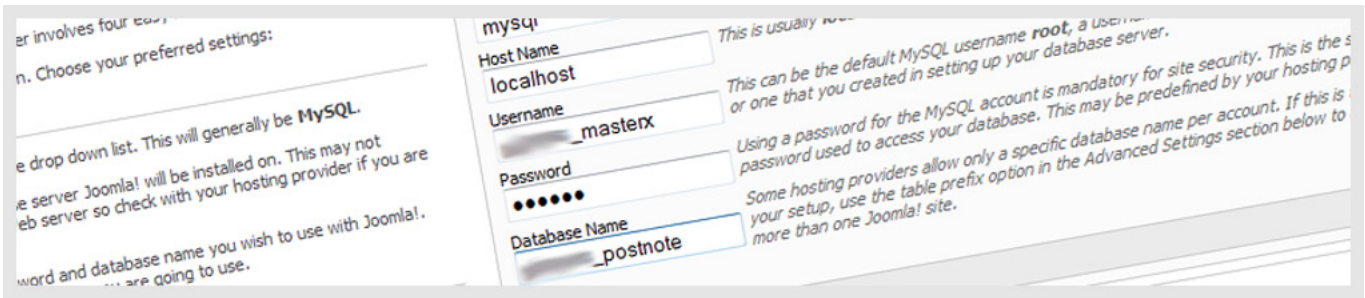
After creating your database, assign a user with full permissions.



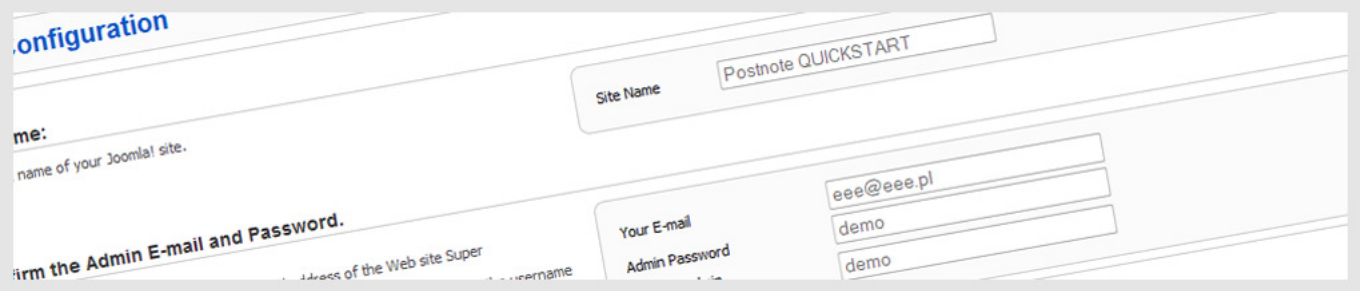
From now on, all conditions are set to start the normal installation of PostNote quickstart version.

## Step 4 - Files Installation

Open your browser and enter the address/directory  where you will perform the installation. Proceed normally through the pages that follow, as a standard joomla installation. Enter the host name (usually is localhost), the selected username assigned to the database, his password and finally the name of the database created earlier in the control panel. Follow into the next pages.



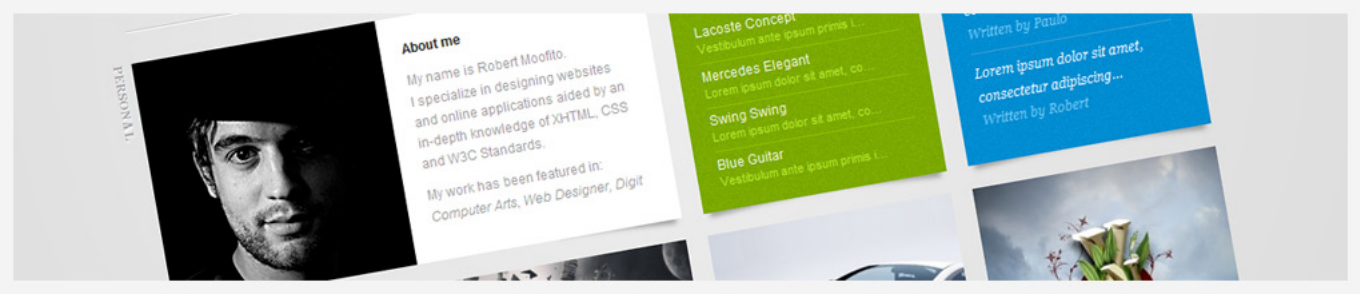
When you reach the page where you would fill the  name of administrator,  e-mail address and password, you will find these fields inaccessible. Do not worry, it's perfectly normal because it is on purpose. Remember that this is a version prepared by Gavick and after the installation is complete, you can modify your data.



As with any installation of joomla, the last page will be prompted to rename or delete the folder "Installation" via FTP.

## Step 5 - Access administrative area of joomla

Return to your browser and visit the home page. As you will notice, your new website is now operational and looks like exactly our demo.



To manage your new website, add to the main address "/administrator" and use "admin" as username and "demo" as password.

Inside you can either change the password or create a new user with Super Administrator permissions.

Installation is complete and you can start enjoying your new website.

# Step by Step Installation

Assuming that already have joomla installed in its lastest version, to perform the installation step by step follow these instructions:

## 1 - Template Installation

From the admin panel, go to the joomla installer selecting "Extensions> Install / Uninstall" . Pick up gk_postnote_J! 15.tgz file, upload file and install. If all goes well, you see a message of successful installation. Then go to "Extensions> Template Manager" and set "GK PostNote" as your default template.

## 2 - Register Module Installation

Using the Joomla installer, select mod_gk_register.zip located in "gk_postnote_rest_files_J! 15/plugins", upload file and install. Go to Module Manager, find GK Register module, publish it on "register" module position and assign to all on menu assignment.

## 3 - Typography Plugin Installation

Using the Joomla installer, select plg.gk_typography.zip located in "gk_postnote_rest_files_J! 15> plugins", upload file and install. Go to Plugins Manager, find GK Typography plugin and enable it. With the integration of this plugin you can easily make use of typography prepared for the template, allowing enrich the look of your articles.

## 4 - System Menu Parameters Plugin Installation

Through Joomla installer, select plg_system_menuparams.zip located in "gk_postnote_rest_files_J! 15/plugins" upload file and install. This plugin is to be used with T3 Templates supporting Enhanced Mega Menu. To activate JA Menu Parameters plugin go to Plugins Manager and enable it.

## 5 - News Show Pro GK4 Module Installation

Get News Show Pro GK4 extension from our dedicated section of free download Extensions. After downloading it to your desktop, install thought Joomla installer. If all goes well, a message will be display with successful installation and with a brief introdution. You can find it on Joomla Modules Manager.

To understand how to use and configure GK4 News Show Pro, download respective support documentation that comes with the NSP GK4 package.

## 8 - K2 Component Installation

To use the free K2 component, please visit the following URL and download the corresponding component of the JoomlaWorks team. Install it using the Joomla installer.

*Download: http://getk2.org/*

## 9 - All Videos Plugins Installation

Get this free plugin extensions for media management for Joomla from JoomlaWorks. Install it using the Joomla installer. This plugin will allow you to interact with K2 component.

*Download: http://www.joomlaworks.gr/*

## 10 - JComments Component Installation

To use the free JComments component, please visit the following URL and download the corresponding component of the Joomla Tune team. Install it using the Joomla installer.

*Download: http://www.joomlatune.com/jcomments-downloads.html*

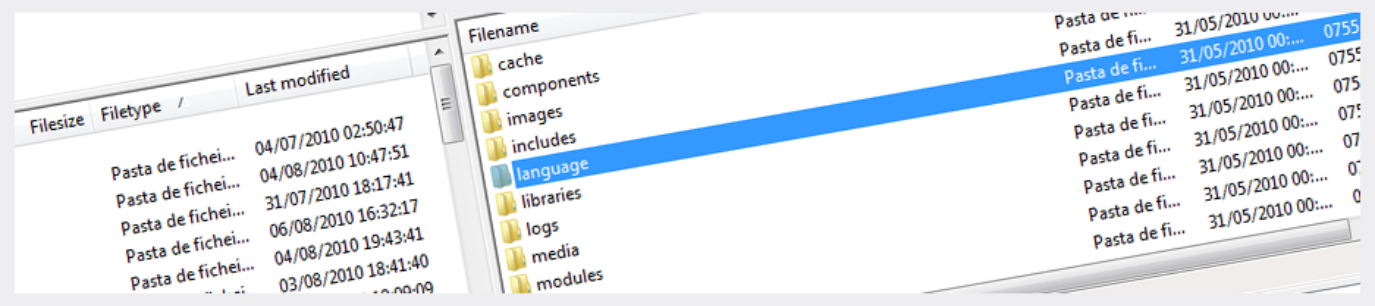
Once installed, you must copy the following files located on "gk_postnote_rest_files_J! 15/jcomment theme/gk_style" and move them to the following directory on your website ../components/com_jcomments/tpl/.

Next you need to define "gk_style" as default template to be used on JComments Layout. Change it on "Components > JComments > Settings > Layout > View > Template" and save settings.

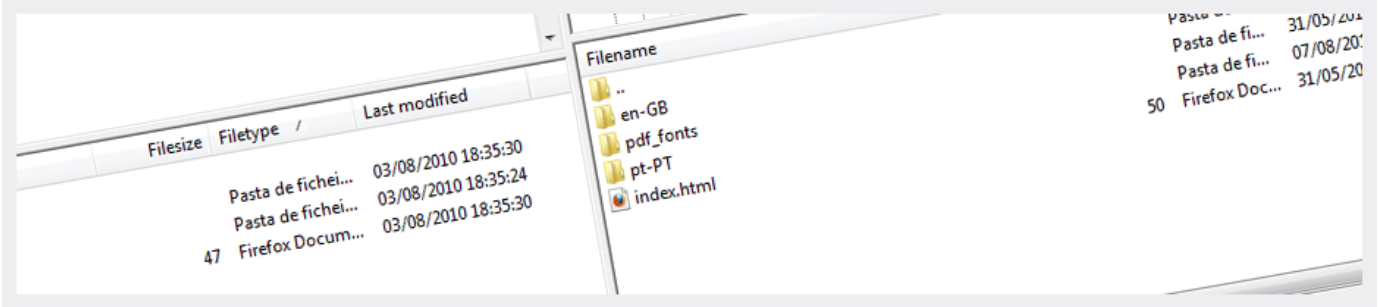
# Template Language Support

PostNote Template like all other Gavick Templates, have language file support. So You can easily create a support file for your native language. Just follow the instructions given below.

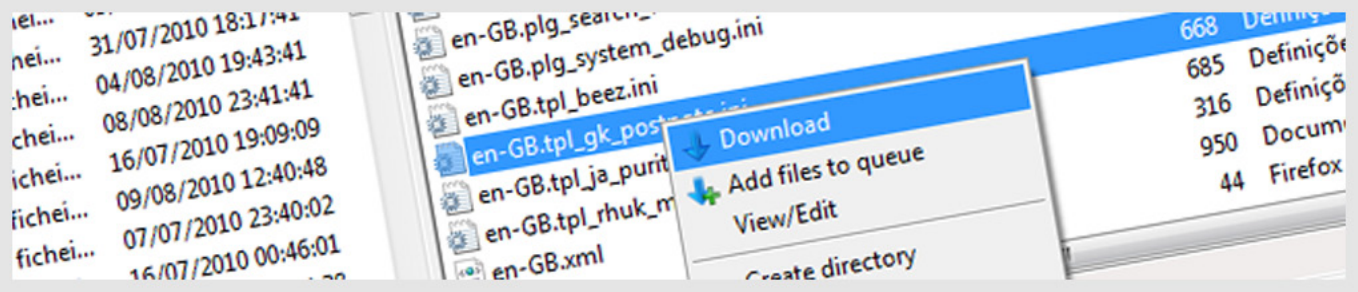
For this example, we will use my native language - Portuguese. Using an FTP software, go to your joomla language directory.



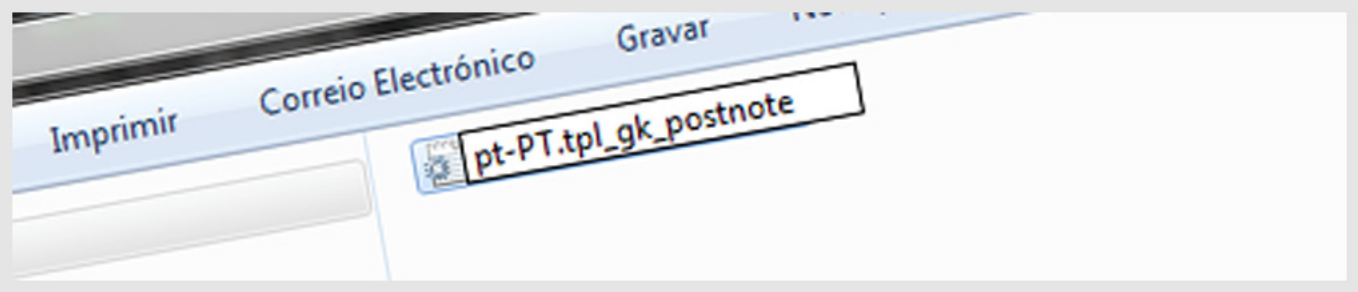
Enter into the "en-GB" directory and find en-GB.tpl_gk_postnote.ini file.



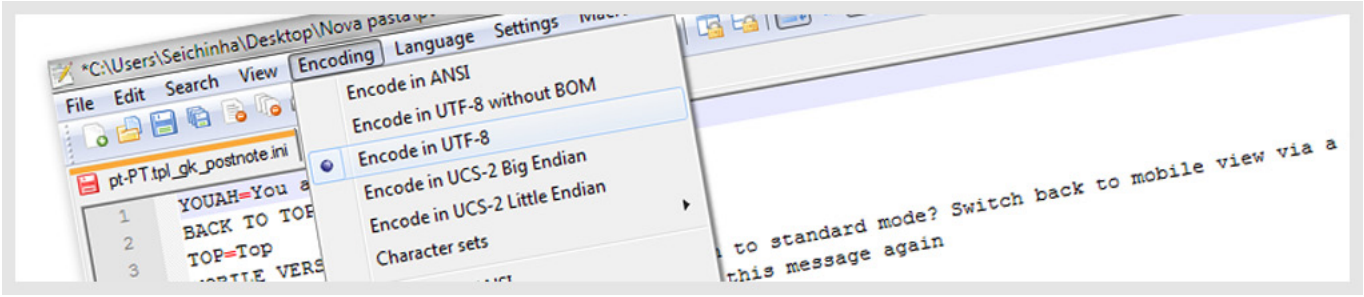
Download this file to somewhere on your desktop.



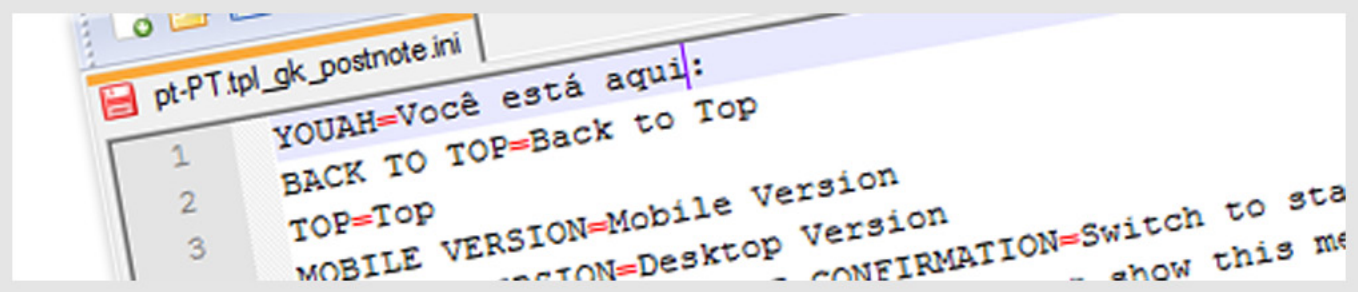
Rename en-GB.tpl_gk_postnote.ini file with prefix that identify your language. In the case of Portuguese, the file renamed would be as pt-PT.tpl_gk_postnote.ini.



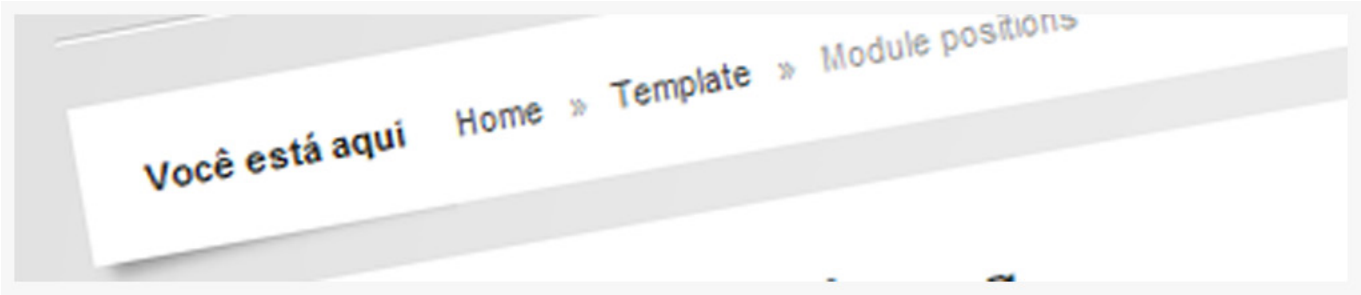
You can open the file using a text editor or source code editor (I recommend Notepad + +). In case of your native language use specific encode characters, you have to change the formatting prior to its codification. In the case of Portuguese and using NotePad++, just go to "Encode" top menu, modify to "Encode in UTF-8" and then save the document.



The document is ready to receive your translation. For example, to translate "You are here" to "Você está aqui".



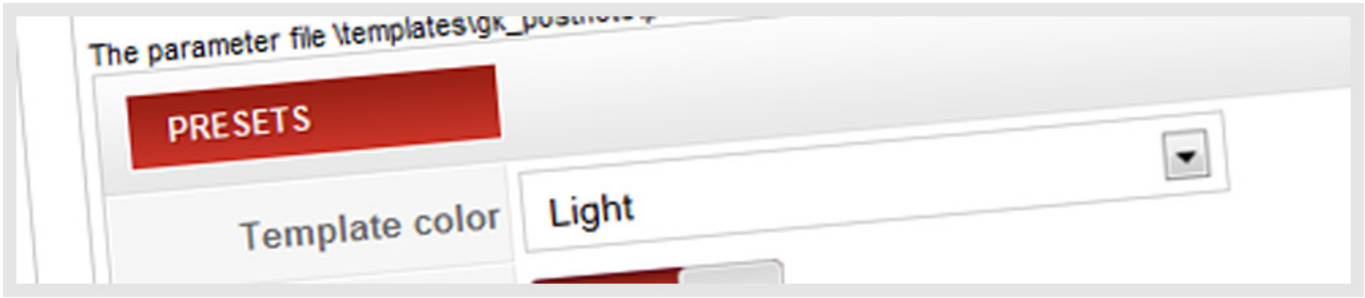
And let's see the result on frontend.



# PostNote Template Parameters

PostNote comes with several parameters that you can configurate as your needs. To access the template parameters, navigate to "Extensions > Template Manage" and select gk_postnote template.

Press "edit" option or just click on template link as you be able to see the following parameters table.



Template color: Select default theme style between "Light - Dark".

Show mainbody on frontpage : Define if mainbody block is displayed on frontpage or not.

Mainbody position: Set mainbody position according to the following positional:

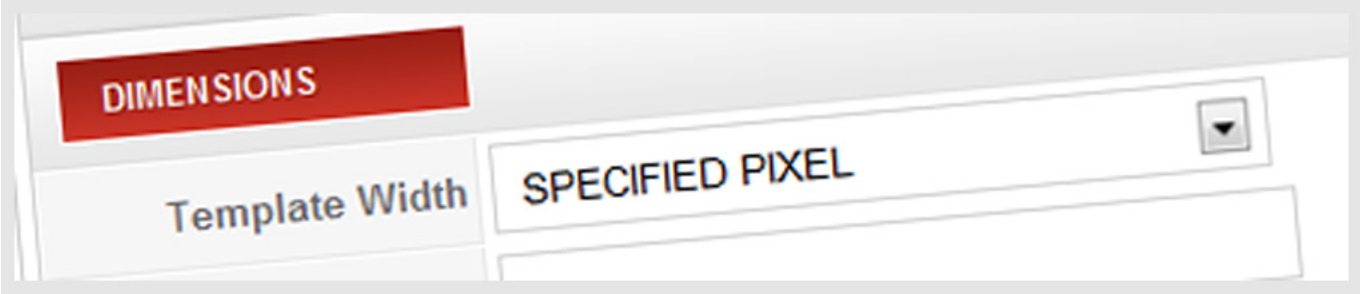
. No mainbody
. Mainbody or component
. Mainbody before component
. Mainbody after component

Default Layout: This template supports various layout options. Check the options from dropdown. Advanced users can create custom page layouts, while using Page Layouts Overwrite option below.

Page layouts overwrite: Assign specific layout for each page in format: Itemid=layout_name or com_name=layout_name. Each page per row. Eg: The Sport section has the Itemid=385 and you want to use a full with layout (without left, right module positions). You can have a setting: '385=1column'. You can add new layout options by duplicating and customize the main 'default.php' layout.

Iphone: Define Layout Style For Iphone Agents.

Other Handheld devices: Define Layout Style For Other Handheld/mobile Agents Like Android, Blackberry, Palm, Windows Mobile or others.



In this section you can configure width in pixels of all template blocks.

Template Width: Choose between various width options:

AUTO=This would be auto decided based on user resolution.
Narrow Screen=782px
Wide Screen=960px
Specified Percentage=fluid
Specified Pixels=fix

Specified width: In case you select "Specified" width option, set value in percentage or pixels, according to option selected. This is set the template width on browser.

Left 1 column width: Set width in percentage to left1 block position. Remember that the value chosen will influence the space available for the mainbody.

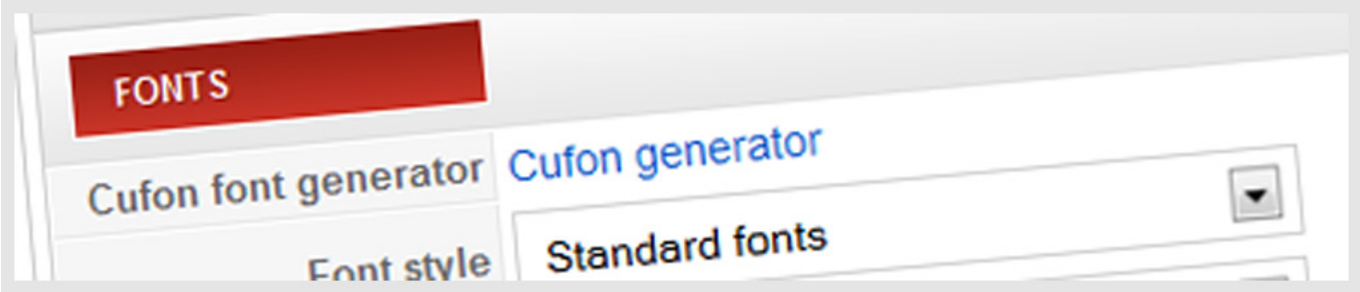
Left 2 column width: Set width in percentage to left 2 column position.

Right 1 column width: Set width in percentage to right 1 column position.

Right 2 column width: Set width in percentage to right 2 column position.

Inset 1 column width: Set width in percentage to inset 1 column position.

Inset 2 column width: Set width in percentage to inset 2 column position.



In addition to the Standard fonts, this template have support the use of Cúfon fontsl.

Font style: Select font type to be use on template rendering.

Standard Fonts Settings:

Basic font families: Select basic font families used in template.

Fonts - headers: Select font families used on headers and moduletables

Font size: Choose Default Font Size For Your Frontend. Template default is 3.

Cúfon Fonts Settings:

Cúfon - basic: Select from available font list for Cúfon rendering on basic template font.

Cúfon font name - base: If you select a basic font on the previous list, write here the font family name. *Example: Cúfon - basic = Caviar.font.js them Cúfon font name will be Caviar*

Cufon - headers: Select from available font list for Cúfon rendering on headers template font.

Cúfon font name - base: By selecting a header font on the previous list, write here the font family name. *Example: Cúfon - headers= LiberationSans-bold.font.js them Cúfon font name will be LiberationSans-bold.*

CSS3 styles: Enables CSS3 styles in the template. Notice that most of browsers supports CSS3, but some not.

Register button only for unregistered users: With this option enable, the "Register" button will only be visible for unregistered users.

Select Logo Type: Choose between Image or Text type logo.

Logo text: Enter Your Logo Text Here. Select Text Above In  Logo Type For This To Take Effect.

Slogan: Enter text content for slogal line. This will be seen below the Text Logo in your frontend.

Tools: Enable this option if you want to enable tools like font-size switcher.

Date: Enable this option if you want to display date on frontend.

Google Chrome Frame support: Enables Google Chrome Frame metatag in head section of template.

T3 Logo at bottom: Enable this option if you want to display T3 Logo at the bottom of the frontend template.

Style Switcher: Enable this option if you want to enable style switcher in floating panel

IE6 Bar: Internet Explorer 6 is on the way out, but there is still a significant number of users that are stuck to this browser. According to this, we decided that our templates are going to support IE 6 slightly. By dint of the "IE6 Bar" plug-in, available in templates menu options, users can apply the upper bar in their IE browser to keep them informed that Internet Explorer can not display the Web site properly. Additionally, instead of the whole range of template styles, we created one style- Universal Internet Explorer 6 CSS - project's website. Thanks to this, users will have the full access to the web's content, but on the other hand, a web site's appearance and functioning might be more rough to some extend.

Top 1-6 vertical text: Here you can set visible text on left side of Top block position from1 to 6.

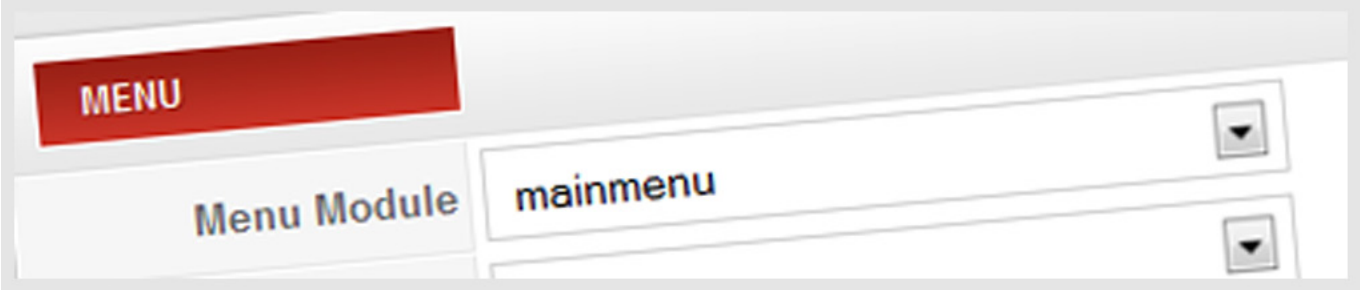
Top 7-12 vertical text: Here you can set visible text on left side of Top block position from 7 to 12.

Top 13-18 vertical text: Here you can set visible text on left side of Top block position from13 to 18.

Bottom 1-6 vertical text: Here you can set visible text on left side of Bottom block position from1 to 6.

Bottom 7-12 vertical text: Here you can set visible text on left side of Bottom block position from 7 to 12.

Copyright: Here you can set text visible on right side of footer, so you can replace the existing frontend copyrights with your own.



Menu Module: Choose Menu Module. This Will Be Displayed In Horizontal Navigation.

Menu Type: Choose From Available Menu's Types. If planning to use Mega Menu, you need to read the user guide, link given in left side description.

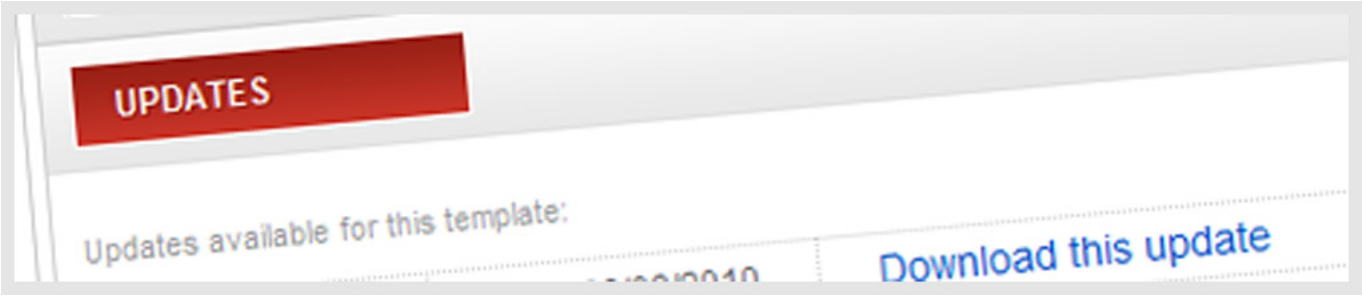
Start Level: Level to start rendering the Menu at. "0" is the first level..

End Level: Level to stop rendering the Menu at. -1 for unlimited.

Customize menu for page: Assign specific menu for each page in format: Itemid=menu_name or com_name=menu_name. Each page per row. Eg: The Sport section has the Itemid=385 and you want to use css menu. You can have a setting: '385=css'.

Animation Type: Select megamenu animation type. The megamenu animation only work in LTR mode.

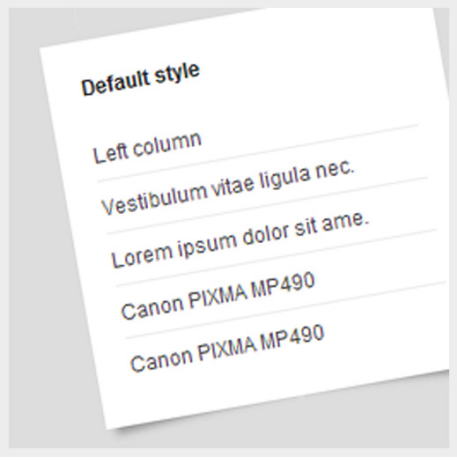
Animation duration: Time (in miliseconds) to slide/fade menu when showing.



Here you can check if any updates is available for this template.

# PostNote Module Variations

Below you can see basic suffixes used in this template (at user positions). Please remember about using space at beginning of suffix name in module options.

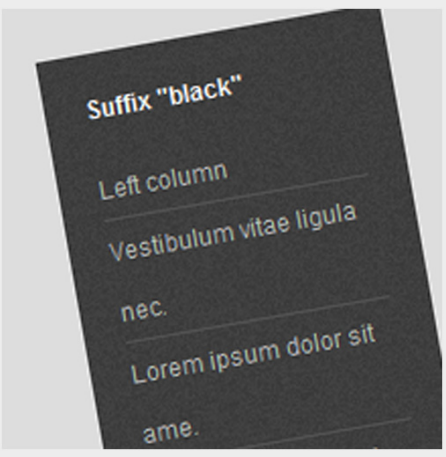


Default Module Style

Module Suffix: "[space]green"

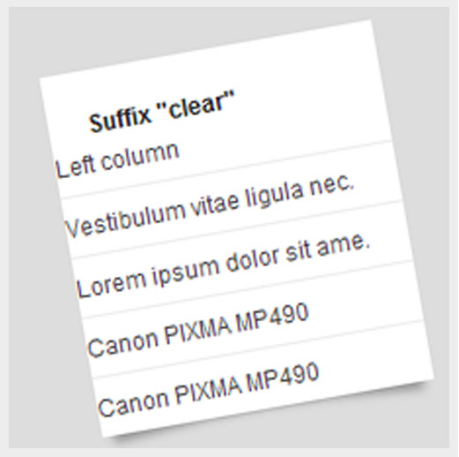
Module Suffix: "[space]blue"

Module Suffix: "[space]orange"

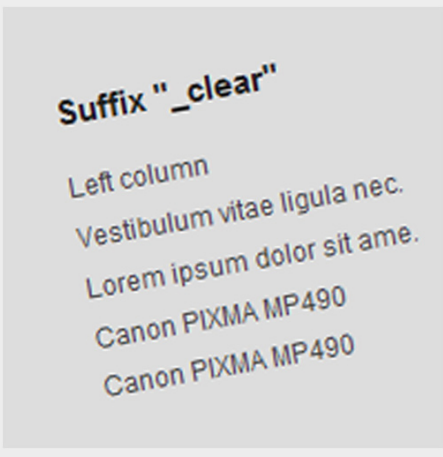


Module Suffix: "[space]black"

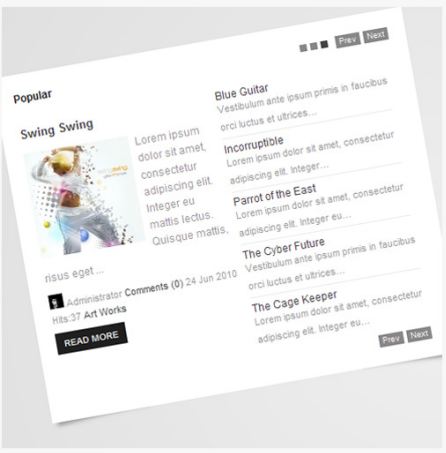
Module Suffix: "[space]clean"



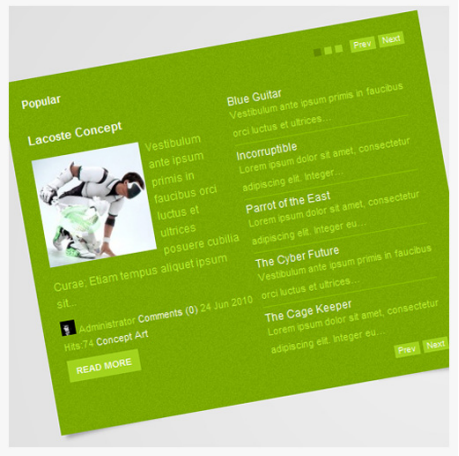
Module Suffix: "[space]clear"



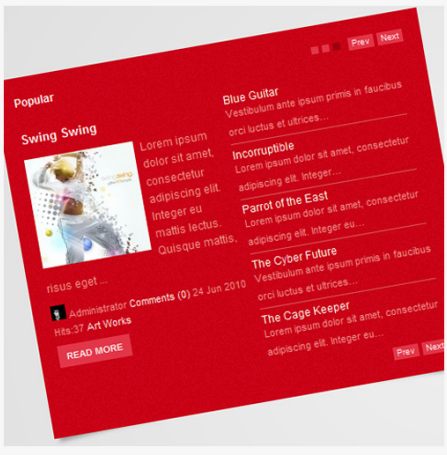
Module Suffix: "_clear"



News Show Pro GK4 default Module Suffix "[space]nsp".

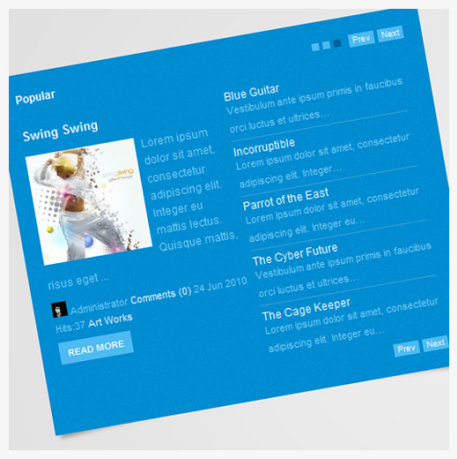


News Show Pro GK4 Module Green Suffix: "[space]nsp[space]green"



News Show Pro GK4 Module Red Suffix: "[space]nsp[space]red"

News Show Pro GK4 Module Black Suffix: "[space]nsp[space]black"



News Show Pro GK4 Module Black Suffix: "[space]nsp[space]blue"

Important information:

To use the embedded style prepared in Postnote for News Show Pro GK4, you need to uncheck the setting "Use default CSS" on the panel "External files". However, you can equally use the style of the module, if you choose.

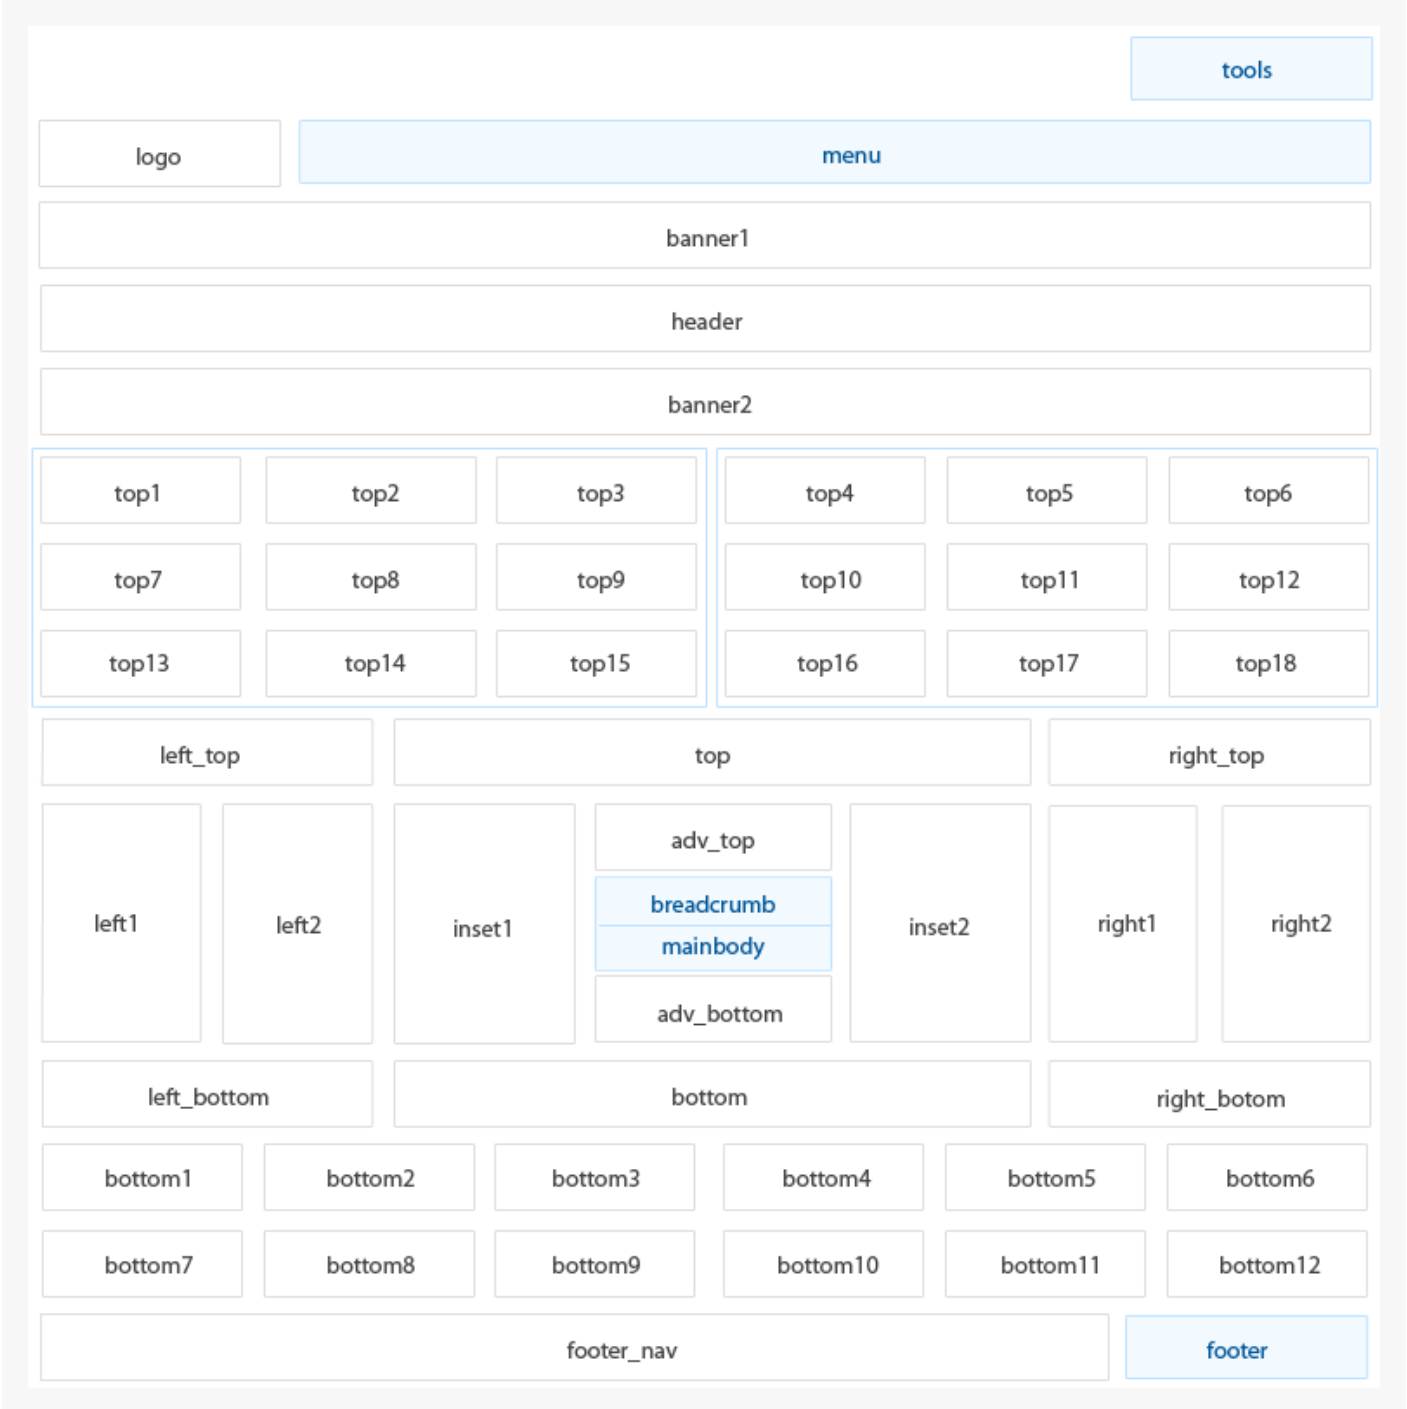
# Template Module Positions

PostNote template has the following structure of modules, available for frontend display. All 40 modules are fully collapsible. Also it have more than 20 module positions ready for tabs and 10 module positions ready for mega menu content display.



# GK typography plugin overview

Like in all joomla templates, characterization of the text is added to enrich even more the article content of the website.

Perhaps for lack of knowledge or lack of experience by some users, we often find Web pages with joomla where it is customary not to use this form of characterization.

So, in order to promote and facilitate the use of the typography, we added a special plugin that will allow users to set easily any typography style in text.

Just carefully follow the next steps. You will realize it's not complicated and that by using this method, you might even surprise your website visitors, while reading the content of your articles, with high and elegance design that will enhance certain information that needs to call the attention of readers.

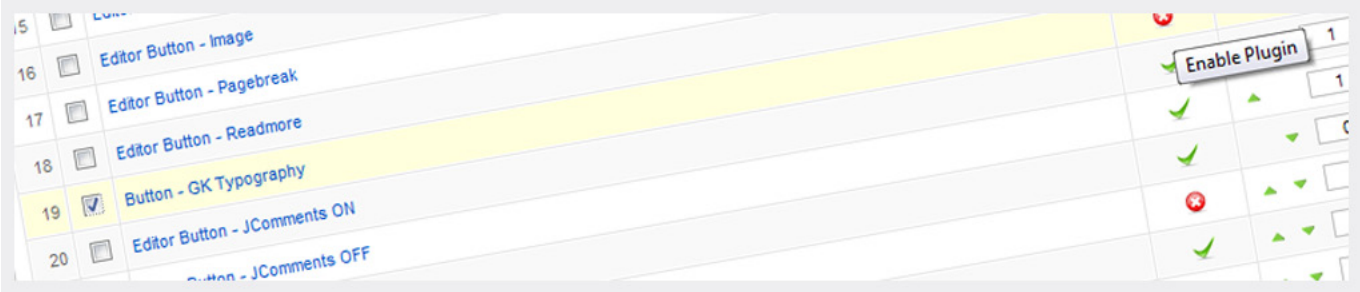
# GK typography plugin Installation

Go to "Extensions > Install/Uninstall" and select the plg.gk_typography.zip file, available inside the plugins folder on the gk_postnote_J!15_rest_files/plugins package. Upload file and install.

A message will appear saying 'Install Plugin Success" and it will show you an small description of the plugin.

Next, you will need to enable it on the Plugin Manager of your Joomla.

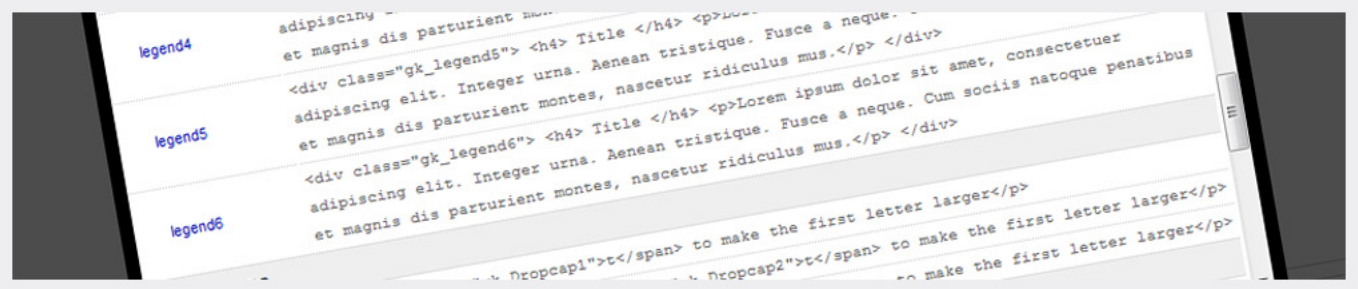
So, navigate "Extensions > Plugin Manager " and find the Button - GK Typography Plugin and enable it.



# GK typography - How to Use?

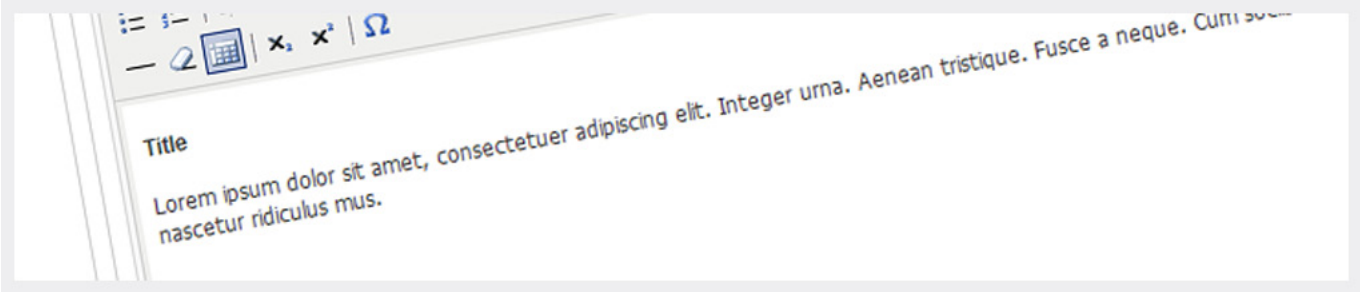
So, let's start by creating a new article. Go to "Content > Articles Manager" and press new button. Now you will see the normal WYSIWYG joomla editor and on the bar above you will find the GK Typography button.

Click on it and a modalbox will popup with all the Typography added to this template. Scroll down top select the desired one, and press the respective text style on the left column.



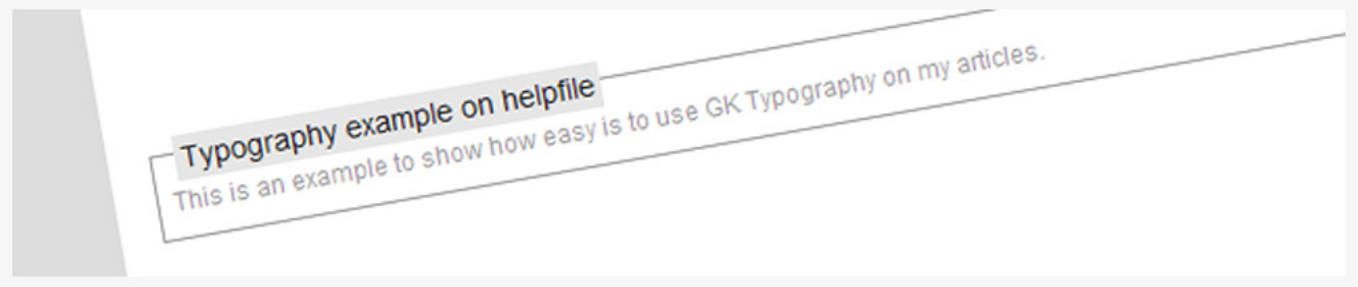
For example, i will select the "legend5" typography style. So, i just press on it and immediatly text will be added on the text area.

For example, i will select the "legend5" typography style. So, i just press on it and immediatly text will be added on the text area.



Now, i just need to replace the existing text with my own and save.

So, let's see the result on frontpage.



Nice, right?

Easy and friendly interface, this will be very important to help you to create stunning articles styles.
